COMPOSITION
Betameson-N® cream: Each gram cream contains Betamethasone Dipropionate USP equivalent to 1mg Betamethasone base and Neomycin Sulphate BP 5mg.

PHARMACOLOGY
Betamethasone is an active topical corticosteroid which produces a rapid response in those inflammatory dermatoses that are normally responsive to topical corticosteroid therapy, and is often effective in the less responsive conditions such as psoriasis. Neomycin sulphate is a broad spectrum bactericidal antibiotic effective against the majority of bacteria commonly associated with skin infections.

INDICATION
Eczema, prurigo nodularis, psoriasis, neurodermatoses, seborrhoeic dermatitis, contact sensitivity reactions, systemic steroid therapy in generalized erythroderma, secondarily infected insect bites & anal & genital intertrigo; specially when secondary bacterial infection is present.

DOSAGE AND ADMINISTRATION
Apply sparingly 2-3 times daily, reducing frequency as condition responds.

CONTRAINDICATION AND PRECAUTION
Untreated bacterial, fungal or viral skin lesions, acne & perioral dermatitits. Long-term continuous topical therapy should be avoided where possible, particularly in infants & children. If applied to the eyelids, care is needed to ensure that the preparation does not enter the eye, as glaucoma might occur.

SIDE EFFECT
Local atrophic changes in the skin such as thinning, striae, & dilatation of the superficial blood vessels, sufficient systemic absorption to produce the features of hypercorticism & suppression of the HPA axis.

USE IN PREGNANCY AND LACTATION
Topical administration of corticosteroids to pregnant animal can cause abnormalities of fetal development including cleft palate & intrauterine growth retardation & fetal ototoxicity.

STORAGE CONDITION
Protect from light and moisture. Keep out of reach of children.

HOW SUPPLIED
Betameson-N® cream: Tube containing 10 gm topical cream.
